

Dura-Sport Leisure Care Protecting your Investment

maintenance & repair
of synthetic sport & play surfaces

Leisure Care is the dedicated in-house maintenance division of Dura-Sport Limited who have been specialising in the construction, surfacing and refurbishment of synthetic grass facilities since 1995.

Effective maintenance of your synthetic grass facility will optimise playing performance, maximise life expectancy, alleviate safety issues and increase revenues.

Our services are designed to compliment your in-house maintenance provision and are tailored specifically to the needs of your facility, from a one-off repair to an ongoing maintenance programme. Located in the Midlands, our highly skilled technicians are ideally placed to offer a prompt and efficient service across the UK.

Maintenance Programmes

Tailored to the needs of your facility, our regular programmes may include:

- Power cleaning of the surface to remove grit, dirt and debris
- De-compaction of the top section of infill
- Redistribution of infill to ensure an even layer across the surface
- Monitoring and reporting of surface integrity including all seams, joints & lines
- Application of moss killer to the perimeter of the facility
- Cleaning of entrances
- Inspection report provided after each visit
- Full facility inspection and condition report provided annually

Power Cleaning

Failure to remove contaminants such as dirt, dust and debris from your pitch or play area will result in the surface gradually compacting. This affects the porosity of the surface and reduces comfort underfoot. Ultimately the lifespan of the facility will be reduced along with its rental revenues.

Our specialist power cleaning service removes the top layer of infill, filters and vacuums out contaminants and then re-distributes the clean infill back on to the surface.

Pitch rejuvenation

This deep cleaning process can reinstate the playing and draining characteristics of the surface by removing the majority of the infill and replacing it with new to bring your facility back to an 'as new' condition. This process can help to add additional life to a surface where the safety of the facility has deteriorated due to poor drainage and where replacement is not an option.

Repairs

As your facility ages, the glue on the backing tape can fail. It is vital that your surface is regularly monitored and any repairs are identified and rectified as soon as possible, not only to improve safety for your users but to avoid larger, more costly repairs later on. We offer a comprehensive range of repair services for synthetic grass, macadam, polymeric surfacing, wet pour rubber, play tiles and grass matting. We can also carry out repairs to damaged shock pad.

Resurfacing

When a synthetic grass surface has reached the end of its usable life, we are able to carry out a full resurfacing using the most suitable product for your facility. This will provide you with a brand new playing surface complete with new guarantees and warranties.

Infill top-ups, removal & dressing

Over time, sand and rubber infill can either compact inside the carpet pile or be removed altogether by players footwear or adverse weather. Equally, as the carpet pile wears down, infill levels can be left high across the surface, presenting a potential slip hazard to your users. Our specialist machinery assesses and corrects the amount of surface infill, returning your facility to within the correct tolerance. This increases its lifespan and helps to prevent health and safety issues.

Cricket pitch maintenance

Our cricket pitch maintenance and repair services include annual programmes, pitch refurbishment and resurfacing. We also offer a bespoke repair and replacement service for cricket cages, netting and perimeter fencing.

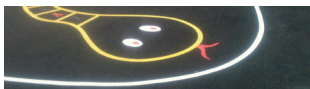

Line marking

You can change or add to the range of sports played on your multi-use games area by adding new line markings. We specialise in the 'cutting in' of permanent in-laid lines. Alternatively, our specialist line marking paints provide a more short term solution, which is ideal for seasonal sports and can last up to 12 months.

Tarmac court renovation & colour coating

Tired and dilapidated tarmac courts can be brought back to life with our tarmac court renovation service. Processes includes pressure washing, surface binding, re-instatement of lines and colour coating.

Playground renovation & marking

Our cost-effective playground marking system can transform a bare tarmac area in to a bright, stimulating play space incorporating fun, educational graphics which will last up to 5 years.

Other services include:

- **Chemical Treatments** - moss, weed and algae control
- **Debris Removal** - leaf collections, litter removal and silt removal
- **Health & Safety** - assessments, inspection reports and safety checks

**SPORTS
EQUIPMENT
ALSO AVAILABLE
INCLUDING NETS
& GOALS**
